

IAM Learning Assistant (AI Agent Microsoft Copilot)

1. Introduction

This project involves designing a declarative AI agent using Microsoft Copilot Studio.

The agent IAM Learning Assistant is built to help users understand Identity and Access Management (IAM) concepts such as Microsoft Entra ID, Zero Trust, MFA and Privileged Identity Management in a simple and practical way.

Image 1: Copilot Studio / Agent overview

2. Problem Statement

IAM concepts are often difficult for beginners because official documentation is technical and spread across multiple sources.

This makes it harder for learners and professionals to quickly understand key security concepts.

3. Solution

To solve this an AI agent was created to:

- Simplify complex IAM topics

Created by: Asad Majeed

- Provide short and clear explanations
- Use trusted public sources
- Include real-world examples

4. Agent Design

4.1 Agent Details

Name: IAM Learning Assistant

Purpose: Simplify IAM concepts

Audience: Beginners, IT professionals, and certification learners

Image 2: Agent setup / overview

4.2 Instructions & Behavior

The agent was configured with clear instructions to:

- Keep responses short (120–250 words)
- Use simple language
- Include examples
- Handle unrelated queries appropriately

Image 3: Instructions section

4.3 Knowledge Sources

The following sources were added:

- Microsoft Learn
- NIST
- OWASP
- Microsoft Security Blog

These ensure reliable and accurate responses.

Image 4: Knowledge sources

4.4 Suggested Prompts

Starter prompts were added to guide users such as:

- What is Microsoft Entra ID?
- Explain Zero Trust
- What is MFA?
- Authentication vs authorization
- What is PIM?
- IAM real-world scenario

Image 5: prompts

5. Testing

The agent was tested with different types of questions.

- Relevant questions were answered clearly and in a structured way
- Irrelevant questions were handled appropriately

Image 6: Example response

Image 7: Irrelevant query

6. Improvements

After testing, one improvement was added:

- Responses now always include a simple real-world example

7. Deployment Limitation

Publishing the agent was not possible due to licensing restrictions.

However, the agent was fully built and tested within Copilot Studio.

Image 8: License error

8. Key Learnings

- Clear instructions improve AI performance
- Reliable sources are important
- Simple explanations work best for users
- Testing helps refine the agent

9. Conclusion

The IAM Learning Assistant shows how AI can simplify complex cybersecurity topics.

It highlights the importance of structured design, clear instructions and user-focused responses.
